Metal Sales Stone Creek Stone Coated Steel Wall Systems for Easy On-Site Application!

The Product:

Stone Creek Steel Wall profiles are a hidden fastener system exceeding today's Universal Building Codes meeting Florida, Dade County approval. Stone Creek is ideal for new construction or retrofit projects. Each Stone Creek panel project is manufactured to your building specifications resulting in lower cost of erection and more timely completion. Stone Creek has a wide selection of colors and a great warranty. Stone Creek is also available as Classic Smooth and Stucco Embossed.

The Benefits:

Stone Creek wall panels are easily applied by those persons erecting the building structure. This alone saves you money and eliminates the need for additional contractors on-site along with possible delays due to scheduling. Our wall panel is easy to maintain because it eliminates water absorption, frost damage, cracking, chipping and peeling.

Compare Our Warranty:

One of the heaviest wall panels at 20 gauge, Stone Creek stands up to harsh environments while offering a 40-year warranty against fade and minimizing unsightly surface distortion inherent among lighter gauge products.

Trouble-Free Installation:

The Stone Creek wall system allows for easier, faster installation resulting in saving money on labor costs.

Assortment of Colors:

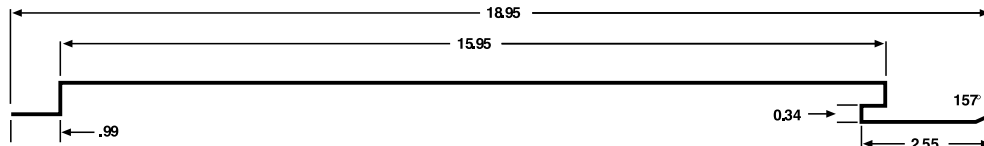

Stone Creek offers a wide variety of standard and custom colors from which to choose or select from.

Installs Year-Round:

Stone Creek wall panels can be installed in any climate, throughout the year, and don't require the installation of a weather barrier. Contractors are able to complete more projects on time and with reduced cost to their customer.

Versatile:

Our wall panels are easily installed on any type of structure using wood, concrete, metal or any one of today's construction methods.

Composition and Material:

Stone Creek wall panels consist of hot-dipped galvanized 20 gauge steel of commercial weight ASTM A924 steel, coated two sides utilizing an epoxy primer with dry wall film thickness of 1 to 1.5 mills. Applied finish is comprised of acrylic and marble crush for a hard and very durable finish.

Sizes: Wall panels are available in 16 inch wide profile and in lengths up to 22 feet. Trim and flashing profiles are 12 feet in length and manufactured from 22 gauge steel.

Colors: Stone Creek is available in 24 standard colors—up to 1500 colors are also available for selection on a custom basis. Available in Kynar PVDF 500 paint system.

Finish: A proprietary formulation combined with marble crush to obtain a beautiful stucco-coated steel panel. Colorfast and long lasting.

Base Metal: 20-22 gauge G90 steel sheet, zinc coated (galvanized) by hot-dip process. Tested to ASTM A653, A924 standards.

Optional Clip: An optional clip design is available for added wind resistance (Force Five).
