The application and detail drawings in this manual are strictly for illustration purposes and may not be applicable to all building designs or product installations. All projects should conform to applicable building codes for that particular area. It is recommended to follow all building regulations and standard industry practices.

Metal Sales Manufacturing Corporation is not responsible for the performance of the roof system if it is not installed in accordance with the suggested instructions referenced in this manual. If there is a conflict between this manual and the actual erection drawings, the erection drawings are to take precedence.

Prior to ordering and installing materials, all dimensions should be verified by field measurements.

Metal Sales reserves the right to modify, without notice, any details, recommendations or suggestions. Any questions you may have regarding proper installation of the Clip-Loc roofing system should be directed to your Metal Sales representative, see pages 2 and 3.

Consult Metal Sales for any additional information not outlined in this manual.

This manual is designed to be utilized as a guide when installing Clip-Loc roofing system. It is the responsibility of the erector to ensure the safe installation of this product system.

**SAFETY**

**STUDY APPLICABLE OSHA AND OTHER SAFETY REQUIREMENTS BEFORE FOLLOWING THESE INSTRUCTIONS.**

The installation of metal roof systems is a dangerous procedure and should be supervised by trained knowledgeable erectors. USE EXTREME CARE WHILE INSTALLING ROOF PANELS. It is not possible for Metal Sales to be aware of all the possible job site situations that could cause an unsafe condition to exist. The erector of the roof system is responsible for reading these instructions and determining the safest way to install the roof system.

These instructions are provided only as a guide to show a knowledgeable, trained erector the correct parts placement one to another. If following any of the installation steps would endanger a worker, the erector should stop work and decide upon a corrective action.

Provide required safety railing, netting, or safety lines for crew members working on the roof.

Do not use the roof panel as a walking platform. The roof panels will not withstand the weight of a person standing at the edge of the panel.

Do not stand on the roof panel at the ends until the panels have been attached.
**Metal Sales Locations**

Metal Sales offers a complete line of metal roof, wall, and fascia panel systems for the commercial, architectural, industrial, residential, and agricultural markets. Metal Sales offers over 30 profiles with a wide selection of widths, colors, and gauges - new construction or retrofit.

**Sellersburg, Indiana Branch**

Metal Sales offers a complete line of metal roof, wall, and fascia panel systems for the commercial, architectural, industrial, residential, and agricultural markets. Metal Sales offers over 30 profiles with a wide selection of widths, colors, and gauges - new construction or retrofit.

CLIP-LOC \ Handling Material

RECEIVING MATERIAL

It is the responsibility of the installer to unload material from the delivery truck. The installer shall be responsible for providing suitable equipment for unloading of material from the delivery.

After receiving material, check the condition of the material, and review the shipment against the shipping list to ensure all materials are accounted for. If damages or shortages are discovered, it should be noted on the Bill of Lading at the time of delivery. A claim should be made against the carrier as soon as possible. Metal Sales is not responsible for any damages or shortages unless they are documented in writing and presented to Metal Sales within 48 hours.

GENERAL HANDLING

Each bundle should be handled carefully to avoid being damaged. Care should be taken to prevent bending of the panel or abrasion to finish. Whenever possible, the bundle should remain crated until it is located in its place of storage. If bundles must be opened, we recommend you recrate them before lifting. To avoid damage please lift the bundle at its center of gravity.

CAUTION

Improper loading and unloading of bundles and crates may result in bodily harm and/or material damage. Metal Sales is not responsible for bodily injuries and/or material damages resulting from improper loading and unloading.

MECHANICAL HANDLING

Forklift - A forklift may be used for panels up to 20'-0" long. Please make sure the forks are at their maximum separation. Do not transport open bundles. When transporting bundles across rough terrain, or over a longer distance, some means of supporting the panel load must be used.

Crane - A crane should be used when lifting panels with lengths greater than 20'-0". Please be sure to utilize a spreader bar to ensure the even distribution of the weight to the pick up points. As a rule when lifting panels, no more than 1/3 of the length of the panel should be left unsupported. Never use wire rope because this will damage the panels.
When handling painted steel care should be taken to prevent scratching of material. Clean gloves should be worn at all times to prevent a reaction with salts found on bare skin. Installers should wear rubber sole shoes to keep from scuffing material while walking on the roof.

Handling of individual panels should be done carefully and properly to avoid bending or damaging. Clip-Loc panels should be carried by grasping the edge of the panel so that the Clip-Loc panel is vertical to the ground. The Clip-Loc panel should not be carried with the panel horizontal to the ground as this could cause the panel to buckle or bend in the center.

Normally individual panels can be handled by people placed every 6'-0" to 8'-0" along the length of the panel.
Please inspect panels for moisture accumulation. If moisture has formed, the panels should be unbundled, wiped dry, and allowed to dry completely. Once dry, carefully restack the panels and loosely recover allowing for ample air circulation.

Bundled sheets should be stored high enough off the ground to allow for air circulation and prevent contact with accumulating water. If possible, elevate one end of the bundle to allow any moisture to run off the panels. Metal Sales recommends covering the bundle with a tarpaulin. Do not use tight fitting plastic-type tarpaulins as panel bundle covers. While they may provide protection from heavy downpours, they can also retard necessary ventilation and trap heat and moisture that may accelerate metal corrosion. If panels are to be stored in possible bad weather, we suggest they be stored inside. Extended storage of panels in a bundle is not recommended. **Under no circumstances should the sheets be stored near or come in contact with salt water, corrosive chemicals, ash, or fumes generated or released inside the building or nearby plants, foundries, plating works, kilns, fertilizer, and wet or green lumber.**
To facilitate the handling of Clip-Loc panels, panel bundles can be lifted and placed on the roof. Bundles need to be placed on the roof in order for the roof structure to handle the weight. Loading capabilities of the structure must be checked.

When lifting packaged sheets, make certain they are adequately supported. Panels less than 20'-0" in length can normally be lifted with a forklift; however, when lifting panels in excess of 20'-0", it is recommended that a spreader bar and slings be used. As a rule, when lifting, no more than 1/3 of the length of the panel should be left unsupported.

Make a plan for bundle placement by determining how much area a bundle of panels will cover. Bundles should be placed on the roof in accordance with the direction the panel will be installed. Consider where the string line, if any, is to run at the eave to set roof panels by. Roof bundles should not interfere with this string line.
Care of metal panels and flashings must be exercised throughout erection. Foot traffic can cause distortion of panel and damage to finish. Traffic over the installed system must be kept to an absolute minimum. If continuous foot traffic is necessary for maintenance over certain areas of the roof, then a permanent walkway should be installed.

If metal panels are installed over open framing, do not use the roof panel as a walking platform. The roof panels will not withstand the weight of a person standing at the edge of the panel. Provide walking platforms to avoid any panel damage as shown below.

When walking on the roof panels is unavoidable, walk only in the flats of the panel. Walking on the ribs can cause damage to the panels. If Clip-Loc is installed over open framing, step in the flat of the panel only and as close to the framing as possible.
Tin snips or a “nibbler” type electric tool are recommended for field cutting Clip-Loc panels. Cutting the steel generates slivers or metal chips. These slivers and metal chips must be immediately removed from the Clip-Loc panels because they will damage the finish and shorten the life of the product.

One method of preventing this problem is to flip the Clip-Loc panels over when cutting. This allows the slivers and metal chips to be brushed from the back side and avoids damaging the paint on the top side of the panels.

When cutting Clip-Loc panels, goggles must be worn for eye protection.

---

**CAUTION**

All product surfaces should be free of debris at all times. Installed surfaces should be wiped clean at the end of each work period. Never cut panels over metal surfaces. Metal shavings will rust on the surface, voiding the warranty.

---

All painted panels and flashings have a factory applied baked on finish. Handling and installing panels may result in some small scratches or nicks to the paint finish. Touch-up paint is available in matching colors from Metal Sales. It is recommended that a small brush be used to apply touch-up paint to those areas that are in need of repair. Touch-up paint does not have the superior chalk and fade resistance of the factory applied paint finish and will normally discolor at an accelerated rate. Aerosol paint should not be used because of the overspray that may occur.

FASTENER INSTALLATION TECHNIQUE

Recommended Tool Type - Use depth locating nose or adjustable clutch on screw gun to prevent overdrilling and strip out. Do not use impact tools or runners.

Seating the washer - Apply sufficient torque to seat the washer - do not overdrive the fastener.

<table>
<thead>
<tr>
<th>CORRECT</th>
<th>TOO LOOSE</th>
<th>TOO TIGHT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sealing material slightly visible at edge of metal washer. Assembly is watertight.</td>
<td>Sealing material is not visible; not enough compression to seal properly.</td>
<td>Metal washer deformed; sealing material pressed beyond washer edge.</td>
</tr>
</tbody>
</table>

To prevent wobbling - Make sure fastener head is completely engaged in the socket. If the head does not go all the way in the socket - tap the magnet deeper into the socket to allow full head engagement. Metal chips will build up from drilling and should be removed from time to time.

Protect drill point - Push only hard enough on the screw gun to engage clutch. This prevents excess friction and burn out of the drill point. Correct pressure will allow screw to drill and tap without binding.

Drilling through sheet and insulation - Ease up on pressure when drilling through insulation to avoid striking the purlin or girt with the point - apply more pressure after drill point contacts purlin or girt.

Drilling through purlin overlaps - Drilling through lapped purlins requires extra care. Excessive voids between purlins sometimes damages drill points and two self-drillers might be necessary to complete the operation. It is sometimes advantageous to predrill.

CONDITION OF SUBSTRUCTURE

Whether over solid substrate or open structural framing, panel distortion may occur if not applied over properly aligned and uniform substructure.

The installer should check the roof deck for squareness before installing Clip-Loc panels. Several methods can be used to verify squareness of the structure for proper installation of the panels.

METHOD "A" - One method for checking the roof for squareness is to measure diagonally across one slope of the roof from similar points at the ridge and eave and obtain the same dimension.

METHOD "B" - The 3-4-5 triangle system may also be used. To use this system measure a point from the corner along the edge of the roof at a module of three (3). Measure a point from the same corner along another edge at a module of four (4). Then by measuring diagonally between the two points established, the dimension should be exactly a module of five (5) to have a square corner. Multiple uses of this system may be required to determine building squareness. If the endwall cannot be made square, the roof system cannot be installed as shown in these instructions.
Proper design and installation of vapor barriers and ventilation systems are important to prevent condensation and the resulting problems of moisture damage and loss of insulation efficiency.

Condensation occurs when moisture laden air comes in contact with a surface temperature equal to or below the dew point of the air. This phenomenon creates problems that are not unique with metal buildings; these problems are common to all types of construction.

The underside of the metal roof on a typical metal building (no attic) should be protected from condensation by insulating with a faced insulation. This should reduce the potential of condensation forming on the underside of the panels.

On buildings that have an attic space or are being retrofitted with a metal roofing system, vents should be placed at both the eave and peak of the roof in order to prevent a buildup of moisture (humidity) in the attic space.

**CAUTION**

Use extreme care when working next to insulation. The insulation will provide a false sense of security by hiding the view of the ground below the insulation.

Insulation is recommended on all applications to act as a sound barrier, prevent condensation, and increase insulating value of the roof or ceiling system.

Typically, panels are installed over solid substrate but can be installed over open framing or metal decking (shown below) with many different types of insulation. Blanket, rigid, and reflective insulation are just a few. Maximum thickness for blanket insulation is four inches. Please contact your insulation supplier for specific recommendations on type of insulation, vapor barriers, and installation procedures.
Steel roofing panels are subject to dimensional changes after installation due to exposure to varying temperatures. The greatest influence is solar energy. Steel roofing absorbs various amounts of heat depending upon color, finish, angle of exposure, and time of exposure.

The relationship of ambient temperature to building structural temperature must be considered when designing a Clip-Loc roof system. The clips for the Clip-Loc panels are designed for expansion and contraction of the panels in the longitudinal direction. Lateral expansion and contraction is accommodated by the configuration of the panel cross section and causes negligible panel movement.

When the total length of panel run exceeds the capability of the clips to accommodate the thermal movement, expansion joints must be designed into the structure.

**SELECTION OF SYSTEM COMPONENTS**

**Clip-Loc Panel Clip** - Clips are placed along the male leg of each panel prior to installing adjacent panels. Design wind uplift must be considered for proper clip spacing.

The following chart should be used to determine proper fasteners required for clip installation on the selected applications (see Fastener Selection Guide page 15 for other fasteners available).

* Length of Dekfast will vary depending on the total thickness of the rigid insulation and metal (see page 17).
** Based on UL580. Subject to project loading requirements, closer clip spacing may be required. Contact your local Metal Sales branch representative for more information (see pages 2 and 3).
**PANEL HIGH SIDE TURN-UP**

Panels must be field turned up at all high side conditions. Field bending panels up helps prevent moisture from draining into building. It is recommended panels be installed, and then field bent. Do not cut panel.

1. Slide Clip-Loc Turn-Up Tool over panel end 2 inches.
2. Bend Clip-Loc panel up until flush with top of panel rib.
3. Repeat steps 1 and 2 for every panel.

**FLASHING NOTCH**

Clip-Loc flashings are available with factory turn-downs that will help conceal closures from weathering and help prevent moisture drainage into building. Flashings must be field notched to fit over panel ribs. These types of flashings are available for all high side conditions.

1. Place High Side Flashing on top of Clip-Loc panel ribs and mark center of each rib on flashing.
2. Slide notching tool over flashing leg and notch out for panel rib at every mark.
3. Repeat steps 1 and 2 for every panel.
The following procedures (pages 21-64) are presented as a general guide for installing Clip-Loc panels, flashings, and accessories on a typical building or residence. Details are shown for installing Clip-Loc and related flashings over solid decking and over open framing. For other applications please contact Metal Sales.

The installation procedures will involve:

1. Panel installation from left to right (looking from eave to peak).
2. Panel clip installation.
3. Eave condition installation.
4. Valley condition installation.
5. Gutter condition installation.
6. Rake condition installation.
7. Rake Parapet condition installation.
10. High Side Eave Condition installation
11. Corner condition installation
12. Sill condition installation
13. Base condition installation
14. Jamb condition installation
**INSTALLING FLOATING RAKE ZEE (OPTIONAL)**

1. If Floating Rake Zee is not used, go to STEP 2 else proceed.
2. Install Floating Rake Zee at all rake and rake parapet conditions. Square Floating Rake Zee to rake condition. **It is critical that Floating Rake Zee be square to building as this will control alignment of panels.**
3. Fasten to decking with #12-14 x 1 1/4" Shoulder Self Driller screws at 1'-0" o.c. **Do not over tighten screws for it is imperative that the Clip-Loc roof system be allowed to float.**
4. If two or more Floating Rake Zees are required, butt ends. **Do not overlap Floating Rake Zees.**

**INSTALLING FIRST PANEL**

Note: Moisture barriers, Eave, Gutter, and Valley flashings must first be installed before panel installation can begin (see pages 23-26). Clip-Loc panels can be installed going from either left or right or right to left looking from eave to peak.

1. If Floating Rake Zee is not used, panel clips are required under first panel, see STEP 3. Apply a row of Double Bead Tape Sealant across Eave flashing approximately 2" from face of Eave flashing.
2. Properly align and install Clip-Loc Inside Closures to accommodate Clip-Loc panel rib alignment. Closures must be lined up with panel ribs for proper seal. **Do not apply tape sealant on top of closure.**
3. If Floating Rake Zee is not used, square panel to rake condition. If Floating Rake Zee is used, position the first panel so female leg is on top of rake zee, panel ribs are aligned with inside closures, and panel is at desired overhang. Additional overhang must be considered for wall panels.
4. Fasten through panel, closure, and sealant into decking with (6) #9-15 x 1 1/2" Woodscrew XL fasteners per panel. See pattern below. **Fasteners must penetrate closure and sealant.**
INSTALLING CLIP-LOC CLIP

1. If roof slope is less than 3:12, apply a continuous bead of tube sealant across inside of clip leg as shown.
   Clip is not required at panel eave end.
2. Install clip over male leg of panel as shown. Make sure short leg of clip is over male leg of panel.
   Clip spacing is determined from chart on (page 18) or from project design wind uplift requirements.
   Design requirements take precedence. Bend down panel barb if necessary for clip to fit male rib.
3. Fasten clip to decking with number of recommended fasteners shown in chart on (page 18).
4. Refer to chart on (page 18) if installing over rigid insulation.

INSTALLING SECOND PANEL

1. If roof slope is less than 3:12, 1/4" Bead Butyl Sidelap Sealant must be placed on top of male leg in sidelap.
2. Place the second panel on top of previously installed panel so that panel ends are flush at eave.
3. Clip-Loc center rib must be snapped in place first followed by female rib. Start snapping panel at one end and working to other.
4. Fasten at eave through panel, closure, and sealant into decking with (6) #9-12 x 1½" Woodscrew XL fasteners per panel. Fasteners must penetrate closure and sealant.
5. Repeat steps 3 and 4 for remaining panels.

If roof slope is less than 3:12 apply a continuous row of 1/4" Bead Butyl Sidelap Sealant on top of male leg.
**CLIP-LOC**

**EAVE OVER DECKING**

1:12 Slope
Minimum

---

**INSTALLATION NOTES**

**All eave flashings must be installed prior to panel installation.**

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat allows for proper Eave attachment.
2. Install Eave flashing by sliding open hem onto Cleat and resting the Eave flashing back against substrate. To hold Eave flashing in place fasten to substrate with #10-12 x 1" Pancake Head Woodscrew 4'-0" o.c.
3. Apply a row of Double Bead Tape Sealant across Eave flashing approximately 2" from face of Eave flashing.
4. Properly align and install Clip-Loc Inside Closures to accommodate Clip-Loc panel rib alignment. Closures must be lined up with panel ribs for proper seal. **Do not apply tape sealant on top of closure.**
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
6. Once panels have been installed, (see pages 21-22), fasten through panel, closure, and sealant into substructure with 6 fasteners per panel. Fasteners must penetrate closure and sealant to eliminate closure movement.

---

**CAUTION**

Additional screws may be required for high snow loading and steep slopes.

Note: All Gutter flashings must be installed prior to panel installation.
1. Install Box Gutter flashing back against substrate. To hold Box Gutter flashing in place, fasten to substrate with #10-12 x 1" Pancake Head Woodscrew 4'-0" o.c.
2. Install Universal Gutter/Downspout Straps every 3'-0" of gutter length. Before continuing make sure strap placement is such that strap can be fastened to substrate with panel fasteners (see note #6). Pop Rivet Universal Gutter/Downspout Strap to Box Gutter.
3. Apply a row of Double Bead Tape Sealant across Box Gutter flashing approximately 2" from backside of gutter flashing.
4. Properly align and install Clip-Loc Inside Closures to accommodate Clip-Loc panel rib alignment. Closures must be lined up with panel ribs for proper seal. Do not apply tape sealant on top of closure.
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.
6. Once panels have been installed, (see pages 21-22), fasten through panel, closure, and sealant into substructure with 6 fasteners per panel. Before continuing make sure at least one fastener secures Universal Gutter/Downspout Strap to substrate. Fasteners must penetrate closure and sealant to eliminate closure movement.
Valley Over Decking (Fixed)

1. Install Valley flashing against substrate. To hold Valley flashing in place, fasten to substrate with #10-12 x 1” Pancake Head fastener 4'-0" o.c.

2. Apply a row of Double Bead Tape Sealant across both sides of Valley flashing approximately 5" from center of valley.

3. Properly align and install Clip-Loc Inside Valley Closures to accommodate Clip-Loc panel rib alignment. Closures are designated "Left" or "Right". Closures must be installed on both sides of valley flashing and lined up with panel ribs for proper seal. **Do not apply tape sealant on top of closure.**

4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 6" placing two beads of tube sealant per side between the flashings.

5. Once panels have been installed, (see pages 21-22), fasten through panel, closure, and sealant into substructure with 6 fasteners per panel. Fasteners must penetrate closure and sealant to eliminate closure movement.

**CAUTION**

Additional screws may be required for high snow loading and steep slopes.
1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.
2. With Clip-Loc panel properly nested over top of Clip-Loc Floating Rake Zee, apply a row of Double Bead Tape Sealant across top of panel rib.
3. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of panel rib. Fasten through Clip-Loc Rake, sealant, roof panel, and into Clip-Loc Floating Rake Zee with ⅛-14 x ⅝" Stitch XL 1'-0" o.c.
4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**INSTALLATION NOTES**

Clip-Loc Floating Rake Zee and Clip-Loc panels must be installed prior to rake installation (see pages 21-22).

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.
2. With Clip-Loc panel properly nested over top of Clip-Loc Floating Rake Zee, apply a row of Double Bead Tape Sealant across top of panel rib.
3. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of panel rib. Fasten through Clip-Loc Rake, sealant, roof panel, and into Clip-Loc Floating Rake Zee with ⅛-14 x ⅝" Stitch XL 1'-0" o.c.
4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.
RAKE (OFF MODULE) OVER DECKING

Field bend panel rib up 1\(\frac{5}{8}\)".

INSTALLATION NOTES

Clip-Loc Floating Rake Zee and Clip-Loc panels must be installed prior to rake installation (see pages 21-22).

Panel must be field bent up 1\(\frac{5}{8}\)".

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.

2. Apply a row of Double Bead Tape Sealant between Floating Rake Zee and field bent panel rib. Fasten field bent panel rib to Clip-Loc Floating Rake Zee with 12-14 x 1\(\frac{1}{2}\)" SD XL 1'-0" o.c.

4. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of Floating Rake Zee. Fasten through Clip-Loc Rake, sealant, and into Clip-Loc Floating Rake Zee with 12-14 x 1\(\frac{1}{4}\)" Shoulder Tech (1'-0" o.c.) Stitch XL 1'-0" o.c. Stagger Stitch fastener so that there is no interference with 12-14 x 1\(\frac{1}{2}\)" SD XL already installed.

5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2\(\frac{1}{2}\)" o.c.
Clip-Loc panels must be installed prior to rake installation (see pages 21-22).

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.

3. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of panel rib. Fasten through Clip-Loc Rake, sealant, and roof panel with 1/4-14 x 7/8" Stitch XL 1'-0" o.c.

4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
RAKE PARAPET (ON MODULE) OVER DECKING

1:12 Slope Minimum

Clip-Loc Rakewall

#1/4-14 x 7/8" Stitch XL (1'-0" o.c.)

Double Bead Tape Sealant

Floating Rake Zee

Clip-Loc Panel

Moisture Barrier (by others)

12-14 x 1 1/4" Shoulder Tech (1'-0" o.c.)

INSTALLATION NOTES

Clip-Loc Floating Rake Zee and Clip-Loc panels must be installed prior to rakewall installation (see page 21-22).

1. With Clip-Loc panel properly nested over top of Clip-Loc Floating Rake Zee, apply a row of Double Bead Tape Sealant across top of panel rib.

2. Install Clip-Loc Rakewall flashing on top of panel rib. Fasten through Clip-Loc Rakewall, sealant, roof panel, and into Clip-Loc Floating Rake Zee with 1/4-14 x 7/8" Stitch XL 1'-0" o.c.

3. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 1'-0" o.c. If Counter Flashing or Reglet is used seal to parapet wall with tube sealant. Do NOT fasten Clip-Loc Rakewall to wall.

4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
Clips-Loc Floating Rake Zee and Clips-Loc panels must be installed prior to rakewall installation (see page 21-22). Panel must be field bent up 1 5/8".

1. Apply a row of Double Bead Tape Sealant between Floating Rake Zee and field bent panel rib. Fasten field bent panel rib to Clip-Loc Floating Rake Zee with 12-14 x 1 1/2" SD XL 1'-0" o.c.
3. Install Clip-Loc Rakewall flashing on top of Floating Rake Zee. Fasten through Clip-Loc Rakewall, sealant, and into Clip-Loc Floating Rake Zee with ¾-14 x 7/8" Stitch XL 1'-0" o.c. Stagger Stitch fastener so that there is no interference with 12-14 1½" SD XL already installed.
4. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 1'-0" o.c. If Counter Flashing or Reglet is used seal to parapet wall with tube sealant. Do NOT fasten Clip-Loc Rakewall to wall.
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of hip (see page 19).

2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end on both sides of hip.

4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of hip.

5. Install 20" Hip flashing and secure to Clip-Loc panel rib with a ¼-14 x 7/8" Stitch XL at every rib.

6. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**INSTALLATION NOTES**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of hip (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end on both sides of hip.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of hip.
5. Place Clip-Loc Hip on top of panel ribs and mark the hip flashing at the center of each panel rib as a guide for notching. Use Clip-Loc Notching Tool to notch out hip flashing (see page 19).
6. Install Clip-Loc Hip flashing and secure to Clip-Loc panel rib with a 1/4-14 x 7/8" Stitch XL at every rib.
7. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.

**Installation Notes**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.

1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of ridge (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 4"-6" from panel end on both sides of ridge.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of ridge.
5. Install SSR Ridge flashing and secure to Clip-Loc panel rib with a 1/4-14 x 7/8" Stitch XL 8" o.c. at every rib.
6. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.

**INSTALLATION NOTES**

1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of ridge (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 4"-6" from panel end on both sides of ridge.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of ridge.
5. Install SSR Ridge flashing and secure to Clip-Loc panel rib with a 1/4-14 x 7/8" Stitch XL 8" o.c. at every rib.
6. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of ridge (see page 19).

2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 4"-6" from panel end on both sides of ridge.

4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of ridge.

5. Place Clip-Loc Ridge on top of panel ribs and mark the ridge flashing at the center of each panel rib as a guide for notching. Use Clip-Loc Notching Tool to notch out ridge flashing (see page 19).

6. Install ridge flashing and secure to Clip-Loc panel rib with a 1/4-14 x 7/8" Stitch XL 8" o.c. at every rib.

7. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**Installation Notes**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of ridge (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end on both sides of ridge.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of ridge.
5. Install Perforated Vent Drip and properly align for 13" Step Ridge Cover. Once Perforated Vent Drip has been properly aligned, secure Perforated Vent Drip to panel ribs with ¼-14 x 7/8" Stitch XL 8" o.c. at every rib.
6. Apply a row of Double Bead Tape Sealant across end of Perforated Vent Drip.
7. Install ridge flashing and secure to Perforated Vent Drip with a ¼-14 x 7/8" Stitch XL at 1'-0" o.c. avoiding panel ribs.
8. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**INSTALLATION NOTES**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans (see page 19).

2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end.

4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures.

5. Install SSR Pitch Break flashing, secure to Clip-Loc panel rib with a ¼-14 x 7/8" Stitch XL (8" o.c.) at every rib.

6. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 1'-0" o.c. If Counter Flashing or Reglet is used seal to parapet wall with tube sealant.

7. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**Installation Notes**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend panel up until flush with top of panel rib. Turn up all Clip-Loc pans (see page 19).
2. Apply a row of Double bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures.
5. Place Clip-Loc Endwall on top of panel ribs and mark the endwall flashing at the center of each panel rib as a guide for notching. Use Clip-Loc Notching Tool to notch out endwall flashing (see page 19).
6. Install endwall flashing and secure to Clip-Loc panel rib with a ¼-14 x 5/8" Stitch XL 8" o.c. at every rib
7. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 12" o.c. If Counter Flashing or Reglet is used seal to parapet wall with tube sealant.
8. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.

**INSTALLATION NOTES**

1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend panel up until flush with top of panel rib. Turn up all Clip-Loc pans (see page 19).
2. Apply a row of Double bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end.
4. Once all closures have been installed, place a row of Double bead Tape Sealant across the top of closures.
5. Place Clip-Loc Endwall on top of panel ribs and mark the endwall flashing at the center of each panel rib as a guide for notching. Use Clip-Loc Notching Tool to notch out endwall flashing (see page 19).
6. Install endwall flashing and secure to Clip-Loc panel rib with a ¼-14 x 5/8" Stitch XL 8" o.c. at every rib
7. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 12" o.c. If Counter Flashing or Reglet is used seal to parapet wall with tube sealant.
8. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures.
5. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat allows for proper Peak attachment.
6. Install Peak flashing by sliding open hem onto Cleat and resting the Peak flashing back over roof panel.
7. Fasten Peak flashing to Clip-Loc panel rib with a \( \frac{1}{4}-14 \times \frac{7}{8}" \) Stitch XL 8" o.c. at every rib.
8. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2\( \frac{1}{2}" \) o.c.

Installation Notes

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.

812.246.1935 (Corporate Office) • www.mtlsales.us.com
Note: Insulation, eave, gutter, and valley flashings must first be installed before panel installation can begin (see pages 46-49). Clip-Loc panels can be installed going from either left to right or right to left looking from eave to peak.

1. If Floating Rake Zee is not used, go to STEP 2 else proceed.
2. Install Floating Rake Zee at all rake and rake parapet conditions. Square Floating Rake Zee to rake condition. **It is critical that Floating Rake Zee be square to building as this will control lignment of panels.**
3. Fasten to framing with #12-14 x 1 1/2” Shoulder Self Driller screws at 1'-0” o.c. **Do not over tighten screws for it is imperative that the Clip-Loc roof system be allowed to float.**
4. If two or more Floating Rake Zees are required, butt ends. **Do not overlap Floating Rake Zees.**
5. After applying Floating Rake Zees, insulation can be installed. Roll out insulation eave to peak laying side of insulation on Floating Rake Zees. Avoid sidelap of insulation directly beneath sidelap of panel (insulation not shown for clarity).

**INSTALLING FIRST PANEL**

1. If Floating Rake Zee is not used, panel clips are required under first panel, see STEP 3. Apply a row of Double Bead Tape Sealant across Eave flashing approximately 2” from face of Eave flashing.
2. Properly align and install Clip-Loc Inside Closures to accommodate Clip-Loc panel rib alignment. Closures must be lined up with panel ribs for proper seal. **Do not apply tape sealant on top of closure.**
3. If Floating Rake Zee is not used, square panel to rake condition. If Floating Rake Zee is used, position the first panel so female leg is on top of rake zee, panel ribs are aligned with inside closures, and panel is at desired overhang. Additional overhang must be considered for wall panels.
4. Fasten through panel, closure, and sealant into framing with (6) #12-14 x 1 1/2” Self Driller XL fasteners per panel. See pattern below. **Fasteners must penetrate closure and sealant.**
**INSTALLING CLIP-LOC CLIP**

**STEP 3**

1. If roof slope is less than 3:12, apply a continuous bead of tube sealant on inside of clip leg as shown. Clip is not required at panel eave end.
2. Install clip over male leg of panel as shown. Make sure short leg of clip is over male leg of panel. Clip spacing is determined from chart on (page 18) or from project design wind uplift requirements. Design requirements take precedence. Bend down panel barb if necessary for clip to fit male rib.
3. Fasten clip to purlins with number of recommended fasteners shown in chart on (page 18).
4. Refer to chart on (page 18) if installing over rigid insulation.

**INSTALLING SECOND PANEL**

**STEP 4**

1. If roof slope is less than 3:12, 1/4" Bead Butyl Sidelap Sealant must be placed on top of male leg in sidelap.
2. Place the second panel on top of previously installed panel so that panel ends are flush at eave.
3. Clip-Loc center rib must be snapped in place first followed by female rib. Start snapping panel at one end and working to other.
4. Fasten at eave through panel, closure, and sealant into framing with (6) #12-14 x 1 1/2" Self Driller XL fasteners per panel. **Fasteners must penetrate closure and sealant.**
5. Repeat steps 3 and 4 for remaining panels.

If roof slope is less than 3:12 apply a continuous row of 1/4" Bead Butyl Sidelap Sealant on top of male leg.

If roof slope is less than 3:12 apply a continuous bead of tube sealant across inside of clip.
All eave flashings must be installed prior to panel installation.

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat allows for proper Eave attachment.
2. Install Eave flashing by sliding open hem onto Cleat and resting the Eave flashing back against substrate. To hold Eave flashing in place fasten to substrate with #10-16 x 1" Pancake Head Woodscrew 4'-0" o.c.
3. Apply a row of Double Bead Tape Sealant across Eave flashing approximately 2" from face of Eave flashing.
4. Properly align and install Clip-Loc Inside Closures to accommodate Clip-Loc panel rib alignment. Closures must be lined up with panel ribs for proper seal. Do not apply tape sealant on top of closure.
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
6. Once panels have been installed, see (pages 44-45), fasten through panel, closure, and sealant into substructure with 6 fasteners per panel. Fasteners must penetrate closure and sealant to eliminate closure movement.
CLIP-LOC  EAVE (OPTIONAL FLOATING) OVER OPEN FRAMING

1:12 Slope
Minimum

- Clip-Loc Clip must be installed at eave for this floating eave detail.
- Clip-Loc panel must be anchored to open framing behind outside closure at all ridge, endwall, and peak conditions to fix the panel when using this floating eave detail.

INSTALLATION NOTES

All eave flashings must be installed prior to panel installation.

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat allows for proper Eave attachment.
2. Install Eave flashing by sliding open hem onto Cleat and resting the Eave flashing back against eave strut. To hold Eave flashing in place fasten to substrate with #10-16 x 1" PHD (1'-0" o.c.)
3. Apply a row of Double Bead Tape Sealant across Eave flashing approximately 2" from face of Eave flashing.
4. Properly align and install Clip-Loc Inside Closures to accommodate Clip-Loc panel rib alignment. Closures must be lined up with panel ribs for proper seal. **Do not apply tape sealant on top of closure.**
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.
All gutter flashings must be installed prior to panel installation.

1. Install Box Gutter flashing back against eave strut. To hold Box Gutter flashing in place fasten to substrate with #10-16 x 1" Pancake Head Driller at 4'-0" o.c.
2. Install Universal Gutter/Downspout Straps every 3'-0" of gutter length. Before continuing make sure strap placement is such that strap can be fastened to eave strut with panel fasteners. See note #6. Pop Rivet Universal Gutter/Downspout Strap to Box Gutter.
3. Apply a row of Double Bead Tape Sealant across Box Gutter flashing approximately 2" from backside of gutter flashing.
4. Properly align and install Clip-Loc Inside Closures to accommodate Clip-Loc panel rib alignment. Closures must be lined up with panel ribs for proper seal. Do not apply tape sealant on top of closure.
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
6. Once panels have been installed, (see pages 44-45), fasten through panel, closure, and sealant into eave strut with 6 fasteners per panel. Before continuing make sure at least one fastener secures Universal Gutter/Downspout Strap to substrate. Fasteners must penetrate closure and sealant to eliminate closure movement.
All valley flashings must be installed prior to panel installation. If two or more valley flashings are required, valley must be installed working from eave to peak.

1. Install Valley flashing against valley plate. To hold Valley flashing in place fasten to substrate with #10-16 x 1" Pancake Head Driller at 4'-0" o.c.

2. Apply a row of Double Bead Tape Sealant across both sides of Valley flashing approximately 5" from center of valley.

3. Properly align and install Clip-Loc Inside Valley Closures to accommodate Clip-Loc panel rib alignment. Closures are designated "Left" or "Right". Closures must be installed on both sides of valley flashing and lined up with panel ribs for proper seal. Do not apply tape sealant on top of closure.

4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

5. Once panels have been installed, (see pages 44-45), fasten through panel, closure, and sealant into valley plate with 6 fasteners per panel. Fasteners must penetrate closure and sealant to eliminate closure movement.

CAUTION
Additional screws may be required for high snow loading and steep slopes.
RAKE (ON MODULE) OVER OPEN FRAMING

1:12 Slope Minimum

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.
2. With Clip-Loc panel properly nested over top of Clip-Loc Floating Rake Zee, apply a row of Double Bead Tape Sealant across top of panel rib.
3. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of panel rib. Fasten through Clip-Loc Rake, sealant, roof panel, and into Clip-Loc Floating Rake Zee with #12-14 x 1½" Shoulder Tech (1'-0" o.c.)
4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

INSTRUCTION NOTES

Clip-Loc Floating Rake Zee and Clip-Loc panels must be installed prior to rake installation (see pages 44-45).
1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.
2. With Clip-Loc panel properly nested over top of Clip-Loc Floating Rake Zee, apply a row of Double Bead Tape Sealant across top of panel rib.
3. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of panel rib. Fasten through Clip-Loc Rake, sealant, roof panel, and into Clip-Loc Floating Rake Zee with #12-14 x 1½" Shoulder Tech (1'-0" o.c.)
4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.
1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.
2. Apply a row of Double Bead Tape Sealant between Floating Rake Zee and field bent panel rib. Fasten field bent panel rib to Clip-Loc Floating Rake Zee with 12-14 x 1½" SD XL 1'-0" o.c.
4. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of Floating Rake Zee. Fasten through Clip-Loc Rake, sealant, and into Clip-Loc Floating Rake Zee with ¼-14 x 7/8" Stitch XL 1'-0" o.c. Stagger Stitch fastener so that there is no interference with 12-14 x 1½" SD XL already installed.
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

INSTALLATION NOTES

Clip-Loc Floating Rake Zee and Clip-Loc panels must be installed prior to rake installation (see page 44-45). Panel must be field bent up 1⅛".

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.
2. Apply a row of Double Bead Tape Sealant between Floating Rake Zee and field bent panel rib. Fasten field bent panel rib to Clip-Loc Floating Rake Zee with 12-14 x 1½" SD XL 1'-0" o.c.
4. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of Floating Rake Zee. Fasten through Clip-Loc Rake, sealant, and into Clip-Loc Floating Rake Zee with ¼-14 x 7/8" Stitch XL 1'-0" o.c. Stagger Stitch fastener so that there is no interference with 12-14 x 1½" SD XL already installed.
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.
RAKE (OPTIONAL) OVER OPEN FRAMING

1. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.

3. Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of panel rib.

4. Fasten through Clip-Loc Rake, sealant, and roof panel with 1/4-14 x 7/8" Stitch XL 1'-0" o.c.

5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.

INSTALLATION NOTES

Clip-Loc panels must be installed prior to rake installation (see page 44-45).

- Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat installation allows for proper Clip-Loc Rake attachment.
- Apply a row of Double Bead Tape Sealant across top of Clip-Loc panel rib.
- Install Clip-Loc Rake flashing by sliding open hem onto Cleat and resting the Clip-Loc Rake flashing on top of panel rib.
- Fasten through Clip-Loc Rake, sealant, and roof panel with 1/4-14 x 7/8" Stitch XL 1'-0" o.c.
- If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
Rake Parapet (On Module) Over Open Framing

1. With Clip-Loc panel properly nested over top of Clip-Loc Floating Rake Zee, apply a row of Double Bead Tape Sealant across top of panel rib.
2. Install Clip-Loc Rakewall flashing on top of panel rib. Fasten through Clip-Loc Rakewall, sealant, roof panel, and into Clip-Loc Floating Rake Zee with ¼-14 x 7/8” Stitch XL 1'-0" o.c.
3. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 1'-0" o.c. If Counter Flashing or Reglet is used seal to parapet wall with tube sealant. **Do Not Fasten Clip-Loc Rakewall to wall.**
4. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**INSTALLATION NOTES**

Clip-Loc Floating Rake Zee and Clip-Loc panels must be installed prior to rakewall installation (see pages 44-45).

- **1:12 Slope Minimum**

![Diagram of Clip-Loc Rakewall installation over open framing]
**Installation Notes**

Clip-Loc Floating Rake Zee and Clip-Loc panels must be installed prior to rakewall installation (see pages 44-45). Panel must be field bent up 1 5/8".

1. Apply a row of Double Bead Tape Sealant between Floating Rake Zee and field bent panel rib. Fasten field bent panel rib to Clip-Loc Floating Rake Zee with 12-14 x 1 1/2" SD XL 1'-0" o.c.
3. Install Clip-Loc Rakewall flashing on top of Floating Rake Zee. Fasten through Clip-Loc Rakewall, sealant, and into Clip-Loc Floating Rake Zee with 1/4-14 x 7/8" Stitch XL 1'-0" o.c. Stagger Stitch fastener so that there is no interference with 12-14 x 1 1/2" SD XL already installed.
4. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 1'-0" o.c. If Counter Flashing or Reglet is used seal to parapet wall with tube sealant. **Do Not Fasten Clip-Loc Rakewall to wall.**
5. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of hip (see page 19).

2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end on both sides of hip.

4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of hip.

5. Install 20" Hip flashing and secure to Clip-Loc panel rib with a ¼-14 x ⅞" Stitch XL at every rib.

6. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**INSTALLATION NOTES**

- **Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.**
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of hip. (See page 19.)
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2”-4” from panel end on both sides of hip.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of hip.
5. Place Clip-Loc Hip on top of panel ribs and mark the hip flashing at the center of each panel rib as a guide for notching. Use Clip-Loc Notching Tool to notch out hip flashing. (See page 19.)
6. Install Clip-Loc Hip flashing and secure to Clip-Loc panel rib with a \( \frac{1}{4} \)-14 x \( \frac{7}{8} \)" Stitch XL at every rib.
7. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2” placing a bead of tube sealant between the flashings and securing with pop rivets \( 2\frac{1}{2} \)" o.c.

Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.

**INSTALLATION NOTES**

Clip-Loc Clip
Clip-Loc Panel
\( \#/4-14 \times \frac{7}{8} \)" Stitch XL (each rib)
Double Bead Tape Sealant
Clip-Loc Outside Hip Closure
Clip-Loc Hip
Double Bead Tape Sealant

1:12 Slope Minimum

2” MAX.

12” MAX.
Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.

**INSTALLATION NOTES**

1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of ridge (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 4"-6" from panel end on both sides of ridge.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of ridge.
5. Install SSR Ridge flashing and secure to Clip-Loc panel rib with a 1/4-14 x 7/8" Stitch XL 8" o.c. at every rib.
6. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.
RIDGE (OPTIONAL) OVER OPEN FRAMING

1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of ridge (see page 19).

2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 4"-6" from panel end on both sides of ridge.

4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures on both sides of ridge.

5. Place Clip-Loc Ridge on top of panel ribs and mark the ridge flashing at the center of each panel rib as a guide for notching. Use Clip-Loc Notching Tool to notch out ridge flashing (see page 19).

6. Install ridge flashing and secure to Clip-Loc panel rib with a ¾-14 x 7/8" Stitch XL 8" o.c. at every rib.

7. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**INSTALLATION NOTES**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans on both sides of ridge (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2”-4” from panel end on both sides of ridge.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2”-4” from panel end on both sides of ridge.
5. Install Perforated Vent Drip and properly align for 13” Step Ridge Cover. Once Perforated Vent Drip has been properly aligned, secure Perforated Vent Drip to panel ribs with ¼-14 x 7/8” Stitch XL 8” o.c. at every rib.
6. Apply a row of Double Bead Tape Sealant across end of Perforated Vent Drip.
7. Install ridge flashing and secure to Perforated Vent Drip with a ¼-14 x 7/8” Stitch XL at 1’-0” o.c. avoiding panel ribs.
8. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2” placing a bead of tube sealant between the flashings and securing with pop rivets 2½” o.c.

Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.

INSTALLATION NOTES
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans (see page 19).

2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2”-4” from panel end.

4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures.

5. Install SSR Pitch Break flashing, secure to Clip-Loc panel rib with a ⅛-14 x ⅞” Stitch XL 8” o.c. at every rib.

6. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 1'-0” o.c. If Counter Flashing or Reglet is used seal to parapet wall with tube sealant.

7. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2” placing a bead of tube sealant between the flashings and securing with pop rivets 2⅛” o.c.

**INSTALLATION NOTES**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans (see page 19).

2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end.

4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures.

5. Place Clip-Loc Endwall on top of panel ribs and mark the endwall flashing at the center of each panel rib as a guide for notching. Use Clip-Loc Notching Tool to notch out endwall flashing (see page 19).

6. Install endwall flashing and secure to Clip-Loc panel rib with a ¼-14 x 7/8" Stitch XL 8" o.c. at every rib

7. Install Counter Flashing, Reglet, or wall panel and fasten to parapet wall with appropriate fastener 1'-0" o.c. If Counter Flashing or Reglet is used, seal to parapet wall with tube sealant.

8. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2½" o.c.

**INSTALLATION NOTES**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
HIGHSIDE EAVE OVER OPEN FRAMING

1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures.
5. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat allows for proper Peak attachment.
6. Install Peak flashing by sliding open hem onto Cleat and resting the Peak flashing back over roof panel.
7. Fasten Peak flashing to Clip-Loc panel rib with a 1/4-14 x 7/8" Stitch XL 8" o.c. at every rib.
8. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2 1/2" o.c.

**INSTALLATION NOTES**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
1. Once panels have been installed, slide Clip-Loc Turn-up Tool over end of panel and bend pan up until flush with top of panel rib. Turn up all Clip-Loc pans (see page 19).
2. Apply a row of Double Bead Tape Sealant across panel, up and over all ribs approximately 2"-4" from panel end.
4. Once all closures have been installed, place a row of Double Bead Tape Sealant across the top of closures.
5. Place Clip-Loc Peak on top of panel ribs and mark the peak flashing at the center of each panel rib as a guide for notching. Use Clip-Loc Notching Tool to notch out peak flashing (see page 19).
6. Position and install Cleat to wall with appropriate fastener, 1'-0" o.c. Make sure Cleat allows for proper peak attachment.
7. Install Clip-Loc Peak flashing by sliding open hem onto Cleat and resting the peak flashing back over roof panel.
8. Fasten Clip-Loc Peak flashing to Clip-Loc panel rib with a #1/4-14 x 7/8" Stitch XL 8" o.c. at every rib.
9. If two or more flashings are required, lap the flashing over the previously installed flashing by a minimum of 2" placing a bead of tube sealant between the flashings and securing with pop rivets 2/12 o.c.

**INSTALLATION NOTES**

- Clip-Loc panel must be anchored to solid deck behind outside closure at all ridge, hip, endwall, and peak conditions to fix the panel when using this floating eave detail.
Size and location of all roof penetrations should be an important consideration. Areas around roof vents or rooftop units may show that corrosive fumes are emitted from a process within the building.

INSTALLATION NOTES

Note: The following procedures are for vent pipes 6" or less and not transmitting extremely hot or caustic materials. When installing vent pipes abide by the local plumbing codes.

1. Determine the size and length of the vent pipe to be raised.
2. Take the appropriate measurements for the vent location and mark them on the Clip-Loc panel. The vent pipe must extend through the flat of the roof panel. If the vent pipe extension cannot be raised directly into the flat of the new roof panel, elbows should be used to offset the pipe. Cut the panel to fit the vent pipe properly.
3. Use a light gauge angle to secure and plumb the vent pipe to the framing system.
4. Flash the vent pipe with a Rubber Roof Jack or similar pipe flashing.
5. Apply Tube Sealant between the panel and the base of the Rubber Roof Jack as well as the top where the boot meets the pipe.
6. Attach the base of the Rubber Roof Jack to the panel using #1/4-14 x 7/8" Stitch XL fasteners.
Though factory applied prepainted finishes are very durable and will last many years, eventually it may be desirable to thoroughly clean or repaint them.

Dirt pickup may cause apparent discoloration of the paint when it has been exposed in some dirt laded atmospheres for long periods of time. In areas of strong sunlight, slight chalking may cause some change in appearance. A good cleaning will often restore the appearance of these buildings and render repainting unnecessary. An occasional light cleaning will help maintain a good appearance.

In many cases, simply washing the building with plain water using a hose or pressure sprayer will be adequate. In areas where heavy dirt deposits dull the surface, a cloth or soft bristle brush and solution of water and detergent (\( \frac{1}{3} \) cup of laundry detergent per gallon of water for example) may be used. This should be followed by an adequate rinse of water. Do not use wire brushes, abrasives, or cleaning tools which will abrade the coating surface.

Mildew may occur in areas subject to high humidity but is not normally a problem due to the high inherent mildew resistance of the baked finish that is used. However, mildew can grow on dirt and spore deposits in some cases. To remove mildew along with the dirt, the following solution is recommended.

\[
\begin{align*}
\frac{1}{3} \text{ cup detergent} & \quad (\text{Tide}^* \text{ or equivalent}) \\
\frac{2}{3} \text{ cup trisodium phosphate} & \quad (\text{Solex}^* \text{ or equivalent}) \\
1 \text{ quart of 5\% sodium hypochlorite solution} & \quad (\text{Clorox}^* \text{ or equivalent}) \\
3 \text{ quarts of water} & 
\end{align*}
\]

Strong solvents and abrasive type cleaners should be avoided. Most organic solvents are flammable and toxic and must be handled accordingly. When using a solvent, consult maintenance professionals and label instructions for proper handling and disposal of washings. If required, a mild solvent such as mineral spirits can be used to remove caulking compounds, oil, grease, tars, wax, and similar substances. Use a cloth dampened with mineral spirits and apply only to areas which are contaminated. Follow up the use of this mild solvent with detergent cleaning and rinsing.
